

WHY NOT BUY DIRECT?

TeleTech now introduces the TSA2100-VoicePilot in United Kingdom and Ireland.

TSA2100-VoicePilot features

- **No acoustic feedback - whatsoever**

The TSA2100-VoicePilot provides new dimensions in acoustic performance and excellence in sound quality and totally eliminates all risks of decreased performance due to reflections.

- **No waste of time... - Plug 'n Go**

The TSA2100-VoicePilot is fast and easy to install. With a VoicePilot you can forget all about howling or unacceptable sound quality - no matter how you install the unit. You will never need to solve unexpected and time-consuming problems caused by poor acoustics, even in a lift with difficult acoustic conditions.

- **Compact - can be built in anywhere**

With the compact and slim design, the TSA2100 can fit in anywhere - and yet there are no compromises regarding input-/output possibilities for accessories. TSA2100 even has a built in amplifier for an inductive loop, making such an option very cost effective and a matter of "Plug and Play".

- **Compatible with the well known AutoDial**

TeleTech knows that simple and easy installation, function and programming are important in the "real world" and the TSA2100 is of course no exception. All basic functions, programming and communication are fully compatible with the well known TSA5100-AutoDial series.

With this compatible function it is possible to mix the TSA2100 and the TSA5100 as you wish - also within the same installation where up to eight units can share one phone line. The same is even possible in a GSM-system where up to eight TSA2100 and/or TSA5100 as GSM-Slaves can also share one GSM-Master through a simple 2-wire connection.

A selection of available accessories

PSB30 External Alarm Point

External alarm point with true two-way communication (microphone and speaker) to be placed on top of, under the cabin or in the shaft pit. The PSB30 provides easy connection by modular jacks and indication light in the alarm button for extra security and convenience.

ILT-1 Inductive Loop Adapter

The inductive loop adapter represents an easy and cost effective way of installing an Inductive Loop conforming to EN 81 70. The loop adapter is "Plug and Play" compatible with both the TSA2100 and the TSA5100 series - Just connect it to the dedicated output and install the enclosed loop wire. No separate power supply or backup is required.

TPS10 Power Supply With Backup

The TPS10 power supply is designed for the TSA2100 series. It has separate outputs for connection of up to four TSA2100 lift alarms and a built in backup battery with more than sufficient power to meet the requirements in EN 81-28. Input voltage: 18 - 30 VDC / 15 - 24 VAC or 230 VAC by use of the optional adaptor.

Machine Room Communication Handset

This high quality handset for the motor room provides internal communication between the motor room and the lift cabin.

Fire Fighter Communication System

Dedicated communication units for fire fighter landing place and motor room. In combination with a TSA2100 or TSA5100 lift alarm it forms a complete fire fighter communication system conforming to EN81-72.

ABP TeleTech A/S was established in 1994 specializing in telecommunication and telemetry for industrial purposes. Since 1997 we have concentrated on developing state of the art alarm equipment for lifts. The experience derived from the industrial sector is used in the construction of the alarms, one of the reasons for the high level of quality in our products. ABP TeleTech A/S is the absolute leading supplier in our high quality demanding home market. By now we have produced more than 50.000 lift alarms of which about half have been exported.
